Sorry to hear that Martin. I guess Glendive was a bit of an oddity, not that often that the entire crew works that well together, I wish it would happen more often. Let us know if we can be of any assistance out there, if you need any sort of subsurface curtains or sediment control let us know, that's another thing we've got lots of experience with.

See you on the next one.

This one hammered me Dean. Not nearly as fun as Glendive. Thanks for reaching out, it never hurts.

Not sure if you all are involved in the Animas River release but if you need any on water support we have jet boats and airboats available. Please keep us in mind.

Thanks,
